

Criteria	Excellent	Good	Inadequate	Not Submitted (Marks: 0.0)
Core usage content	The back-end of the two core functionalities are fully built. All functionality is present and website content is loaded from a database using a REST API. <b>40</b>	The core usage content is mostly implemented, but there are still large gaps. <b>30</b>	The core usage content is partially loaded from a database. <b>15</b>	The core usage content is static. <b>0</b>
Database structure	Database structure and variables follow a logical, coherent, and efficient structure. <b>30</b>	Database structure could be more clear and organised. <b>25</b>	Wrong use of variable types, incoherent database structure. <b>10</b>	Database not created <b>0</b>
Separation of Concerns	Presentation, behaviour and content are properly separated <b>15</b>	Concerns are mostly separated, but there are issues <b>10</b>	Some concerns are separated, but there is substantial overlap <b>5</b>	Presentation, behaviour and content are not separated <b>0</b>
Repository	Professional code quality, consistent naming standards, git history, commenting <b>15</b>	The code is mostly adequate, but presents crucial flaws <b>10</b>	Inadequate code quality <b>5</b>	The code is not in the repository <b>0</b>
